

# CONSOLIDATED LAUNDRY MACHINERY

## FeedFaster

### MODEL FF-B

#### FEATURES:

- Increases production and enhances the quality of sheets and other large ironed items
- Operators need only feed the leading edge of linens, the FeedFaster does the rest
- Eliminates creases
- Decreases training time
- Installs in minutes

The FeedFaster is a proven approach to the feeding of sheets and other large and medium size pieces.

It reduces the labor factor as well as increases production, at the same time maintaining a high level of quality.

The linen to be processed is placed on the feed ribbons of the ironer in the normal feeding manner. The FeedFaster then takes over by spreading and straightening the linen as it enters the ironer. Since the FeedFaster has taken over, the operators are able to quickly release the linen and reach for the next piece while the one already fed is still entering the ironer.

The FeedFaster does its spreading and straightening by an extremely simple, ingenious system of a down-draft, or suction air, similar to the flapping of a wet flag in a strong breeze, or hand-shaking rather than simple tensions which cannot spread or straighten wrinkles in the direction of travel.

The FeedFaster takes up only 10" in front of the ironer and small pieces can be fed over the unit without disturbing the set-up, or the unit may easily be moved since it is mounted on casters.

#### TECHNICAL SPECIFICATIONS:

##### WIDTH

125 ½" TO 128 ½" (with caster wheels)

##### DEPTH

16" to 29" (with caster wheels)

##### HEIGHT

38" to 39 ¾" (adjustable)

##### WEIGHT

1580 pounds (net)

1750 pounds (shipping)

##### FAN MOTORS

Two 1HP, totally enclosed, fan cooled

##### ELECTRICAL REQUIREMENT

208/230/460 Volts, 3 Ph., 60 cycle

##### CONTROLS

A dust-proof control box is mounted on the end of the FeedFaster.

A start/stop button and motor overload protection are provided.

Specifications subject to change without notice

**The FeedFaster works with ironers to increase production.**
